Frequently Asked Questions

- When I use the identify button you keep saying a box should pop up that says "view parcel details. I never see the box. What's up with that – *You have a pop-up blocker enabled. You must either disable your pop-up blocker or load something like the Google toolbar that allows pop-ups on sites of your choice while disabling those you don't want.*
- I used to be able to go directly to the township I wanted by clicking it – now how do I do it? – *This is now a statewide database so it isn't limited by county and township. To get the townships to display you must zoom in to a scale where they display. You can then pan around to find your township and zoom in to that. There are several ways to zoom described in this tutorial. Because of the comments we have received we will attempt to make a "search by township" one of our first improvements.*
